PROFESSIONAL SUMMARY

Full-Stack Developer with 1+ year of hands-on experience delivering production-ready features end-to-end, from Laravel/PHP and Supabase/PostgreSQL backends to React.js/Next.js and TypeScript frontends. Built a complete multi-role medical booking platform (Admin, Doctor, Patient) on Laravel with a Next.js/TypeScript client, alongside Supabase-powered e-commerce and legal-consultation platforms. Consistently delivers 30% faster page loads, Lighthouse scores of 95+, and 15% organic traffic growth. Comfortable owning the full pipeline: relational database design, REST API development, authentication/authorization, state management (Zustand, TanStack Query), and CI/CD deployment (Vercel + Railway). Career transition from Veterinary Medicine demonstrates rapid, self-directed mastery of complex technical systems.

TECHNICAL SKILLS

Languages: HTML5, CSS3, SCSS (Sass), JavaScript (ES6+), TypeScript, PHP

Frontend: React.js, Next.js (App Router), TanStack Router, React Router, Framer Motion

Backend: Laravel, Eloquent ORM, RESTful API Design, Laravel Sanctum (Auth), MVC Architecture, MySQL

State Management: Redux, Zustand, React Query / TanStack Query, Context API

Styling: Tailwind CSS, Bootstrap

Forms & Validation: React Hook Form, Zod

Testing: Jest, React Testing Library, Mocha, Enzyme — 80%+ code coverage achieved

Databases & BaaS: MySQL, PostgreSQL, MongoDB, Supabase (BaaS), Eloquent ORM

APIs & Media: REST API, Axios, Fetch API, Cloudinary (media management)

DevOps & Tooling: Git, GitHub Actions (CI/CD), Vite, Webpack, Vercel, Railway, Postman, Chrome DevTools

Architecture: Atomic Design, Component-Based Architecture, SPA, SSR, SSG, Mobile-First, WCAG 2.1 / ARIA

SEO & i18n: JSON-LD Structured Data, Dynamic Metadata, Open Graph, next-intl, i18next, Arabic/English RTL, Dark/Light Mode

Design: Figma pixel-perfect implementation, UI/UX cross-functional collaboration

Methodology: Agile, Scrum

WORK EXPERIENCE

Full-Stack Developer — React.js, Next.js & Laravel

Independent Projects & Client Work | January 2024 – Present | Remote

- Designed and built a full-stack medical booking and management platform with a Laravel/MySQL backend and a Next.js/TypeScript frontend, implementing separate Admin, Doctor, and Patient dashboards with role-based access, database transactions for related records (e.g. User + Doctor creation), and auth-scoped REST endpoints.
- Architected and deployed production-grade web applications across healthcare, e-commerce, legal-tech, and real-estate sectors using React.js, Next.js, TypeScript, and Tailwind CSS; applied code-splitting, lazy loading, Image Optimization, SSR, and SSG to achieve 30% faster page loads and Lighthouse performance scores consistently at 95+.
- Designed scalable state management architectures separating client and server state with Zustand and React Query (TanStack Query); integrated REST APIs via Axios with robust error handling, reducing redundant API calls by 40% and improving UI responsiveness across all projects.
- Engineered type-safe form systems with React Hook Form + Zod schema validation across complex multi-step workflows, delivering real-time feedback and eliminating runtime form errors by enforcing strict schema contracts.
- Optimised SEO using JSON-LD Structured Data, Dynamic Metadata, Open Graph tags, and semantic HTML within Next.js App Router — achieving 15% organic traffic growth and top Lighthouse SEO scores across all Next.js projects.
- Collaborated with UI/UX designers via Figma to translate wireframes into pixel-perfect, WCAG 2.1-accessible components; applied Atomic Design principles to build reusable component libraries, accelerating development velocity across teams.
- Automated CI/CD deployment pipelines using GitHub Actions, deploying frontends on Vercel and Laravel backends/databases on Railway, enabling zero-downtime production releases and maintaining a 95% UI bug-fix rate.
- Delivered multilingual (i18n) applications with next-intl and i18next, including full RTL layout support and Dark/Light mode theming; operated in Agile/Scrum environments using Git and GitHub for version control.

KEY PROJECTS

Alshefaa Clinic — Full-Stack Medical Booking & Management Platform

Laravel | PHP | MySQL | Next.js | React | TypeScript | Zustand | TanStack Router/Query | i18next (AR/EN, RTL) | Tailwind CSS | Cloudinary | Railway | Vercel

Live Demo: clinic-frontend-7bvewwhms-1s-projects-9f2444d6.vercel.app

- Built a full-stack medical appointment platform with a Laravel/MySQL API and a Next.js/TypeScript client, covering three role-based experiences: Admin, Doctor, and Patient.
- Implemented Admin and Doctor dashboards (responsive tables and card views) for managing doctors, appointments, services, and profiles, including a transactional doctor-creation flow that atomically creates linked User and Doctor records.
- Designed auth-scoped API endpoints (e.g. resolving the authenticated doctor via the auth token rather than a URL ID) to keep profile data secure and consistent across the dashboard.
- Modelled bilingual content with structured Arabic/English JSON fields for doctor names and bios, and integrated Cloudinary for reliable image upload and delivery.
- Delivered a fully bilingual (Arabic/English) RTL-aware interface with i18next, TanStack Router/Query for data fetching and navigation, Zustand for global client state, and Tailwind CSS for a responsive booking flow with an inline-status booking modal and doctor carousel.
- Deployed the frontend on Vercel and the Laravel backend/MySQL database on Railway, resolving migration and foreign-key conflicts during data import and configuring SPA routing for production.

Nagd Store — Full-Stack E-commerce Platform

Next.js | TypeScript | Supabase | PostgreSQL | Zustand | Tailwind CSS | Recharts

GitHub: github.com/aml-abdelrhman/nagd-store

- Built a complete e-commerce platform with Next.js App Router and Supabase (PostgreSQL) as the backend, covering product listings, cart, and wishlist with persisted state.
- Developed an admin dashboard with Recharts-powered analytics for tracking sales and inventory, backed by role-based access control in Supabase.
- Implemented authentication flows including Google OAuth, and used Zustand for scalable client-side state management across the storefront and admin views.

Al-Otaibi Law Firm — Full-Stack Legal Consultation Platform

Next.js | TypeScript | Supabase | PostgreSQL | Tailwind CSS | i18n (AR/EN)

Live Demo: otaibi-law-q395.vercel.app

- Built a bilingual (Arabic/English) marketing and client-portal platform for a law firm, with a Supabase/PostgreSQL backend powering consultation booking, case-area listings, a blog, and a team page.
- Implemented a client-facing consultation tracking flow so clients can follow the status of a submitted consultation, plus an authenticated dashboard for the firm's staff to manage incoming requests.
- Integrated a booking form with case-type selection (commercial, criminal, administrative), WhatsApp contact integration, and a fully responsive, mobile-first layout.

Business Pioneers Solution — Monafis Hackathon — 2nd Place Overall · Best UI/UX Design Award

React.js | TypeScript | Tailwind CSS | Supabase | PostgreSQL

Live Demo: fullstack-pioneers.vercel.app | **GitHub:** github.com/aml-abdelrhman/fullstack-pioneers

- Competed against numerous teams and ranked 2nd place overall, earning the exclusive Best UI/UX Design Award from Business Pioneers Holding.
- Engineered a full-stack B2B SaaS dashboard using React.js and Supabase, with secure PostgreSQL data management and real-time synchronisation across multiple modules.
- Implemented authentication, role-based access control, and complex business logic while maintaining a clean component architecture and consistent design tokens within a tight hackathon deadline.

EDUCATION

Bachelor of Veterinary Medicine — Mansoura University, Egypt | 2018–2022 | Grade: Very Good

Science background reflects strong analytical thinking, self-directed learning, and the discipline to master complex technical systems independently.

CERTIFICATIONS & LANGUAGES

Certification: Responsive Web Design — freeCodeCamp (2024)

Languages: Arabic: Native | English: Proficient (B2–C1)
